SoilBiotics products get Ukrainian corn crop off to a stellar start!

SoilBiotics products helped one of our Ukrainian customers get his 2018 corn crop off to a great start. According to our SoilBiotics representative, the grower used a custom SoilBiotics Product Program on a portion of his crop in a side-by-side comparison with a control. **The SoilBiotics treated corn is on the right-hand side of Image A.** Notice the substantial difference in plant size and height.
