

# RESEARCH FOR RESULTS

## SoilBiotics products produce outstanding results in 2016 Potato crop

A comprehensive program of SoilBiotics products resulted in markedly better plant size and flower set in this 2016 Minnesota Potato crop. This large commercial grower in Park Rapids, MN applied 200 lbs. per/acre of **2 - Soil Boost** as a pre-plant soil conditioner and then utilized a per/acre combination of 2 quarts **3 - Growth Boost** and 1 pint **SB4400**, applied at planting. They then followed up with 1 pint per/acre **SB4400** one time during the growing season and 1 quart per/acre **3 - Growth Boost** three times during the season when UAN was applied.

Plants on LEFT are the control. Plants on RIGHT were treated with the SoilBiotics program and show significantly more foliage and root system development, and greater yield.
